EDUCATION

Bachelor of Science in Computer Science
Minnesota State University Moorhead (MSUM)

12/2013
Moorhead, MN

Professional Summary

Experienced Senior Front-End Engineer with expertise in architecting scalable, high-performance web applications. Adept at rapidly prototyping front-end solutions, implementing accessibility best practices, and leading cross-functional teams to drive business impact. Passionate about creating responsive, accessible, and innovative web experiences using modern JavaScript frameworks.

Skills

- **Frontend Development:** HTML/HTML5, CSS/CSS3, SASS, LESS, Bootstrap, JavaScript, TypeScript, VBScript, AngularX, Angular, React, Redux, Preact
- **Backend Development:** C, C++, Java, PHP, Prolog, mini-Pascal, Node.js, Express.js, GraphQL, python
- **Version Control & Collaboration:** Git, GitHub, GitHub Actions, Bitbucket
- **DevOps & Deployment:** Docker, Dependabot, Splunk, Datadog, Spinnaker, Jenkins, AWS (EC2, RDB), GHA, Grafana
- **Testing:** Jasmine, Karma, Istanbul, Mocha, Jest, Enzyme, JUnit, Selenium, playwright
- **Build Tools & Dependency Management:** Webpack, NPM, PNPM, Yarn, Gulp, Grunt, Maven, uv, pip
- **IDEs & Editors:** Netbeans, Eclipse, Moto Dev Studio, Zend Studio, Webstorm, Brackets, VS Code
- **Database Systems:** MySQL, Derby, PostgreSQL, MongoDB
- **Other Technologies:** Ember.js, 960 Grid, PHPEXcel, PFBC, Swiftmailer, RabbitMQ

Work History

Senior Software Engineer (CACI)

09/2025 - Current

- Conducted research and evaluation of emerging Large Language Models (LLMs), producing feasibility analyses and effort estimations to guide product integration decisions.
- Using Open AI's whisper model, implemented full stack solutions for transcription and translation services to support active investigations, improving accessibility of multilingual data and accelerating analysis workflows for the field agents.
- Build banner management system to support alert mechanism for admins to provide visual feedback to the users regarding system updates, warnings and general info.
- Build a robust error handling tech stack to log applications errors and visually render it in the UI while re-utilizing the reusable components from the banner management system.

- Designed and developed responsive, accessible, and reusable React components, ensuring compliance with accessibility standards (WCAG) and improving overall user experience across devices.
- Led the implementation of Matomo analytics, enabling data-driven insights into user behavior and application usage to inform product improvements.
- Managed and maintained npm and Python dependencies, including version upgrades, vulnerability patching, and proactive resolution of security issues identified by automated scanners.
- Collaborated closely with customers, product owners, and design teams to gather feedback, refine requirements, and translate business needs into effective feature implementations.
- Authored and managed user stories and technical tasks, facilitating sprint planning, backlog grooming, and team alignment through Agile ceremonies such as intake sessions and story sizing.
- Partnered with recruiters to coordinate and streamline the hiring process for software engineers, including scheduling interviews, aligning interviewer panels, and ensuring a smooth candidate experience.

Senior Software Engineer (Expedia)

09/2021 - 06/2025

- Developed responsive React widgets for training Generative AI models in collaboration with the Large Language Model (LLM) team.
- Built adaptors to extend the internal framework, enabling experimentation with Agentic AI while ensuring backward compatibility.
- Led the adoption of a micro front-end architecture, facilitating seamless integration of front-end applications with diverse tech stacks.
- Tech lead on an analytics project, collecting data on impressions and interaction events to optimize the user experience.
- Designed and developed reusable, accessible, and extensible React components to enhance application modularity.
- Served as a solution engineer, guiding the team through the complexities of legacy microservices and driving migration to modern coding standards.
- Led initiatives to address and mitigate security vulnerabilities in Node.js-based applications, improving overall application security.
- Developed language translation capabilities for a chat application using Language IO, enabling multi-language support.
- Empowered partners by creating configuration management tools, allowing them to implement custom configurations independently.
- Enhanced the deployment process by introducing GitHub Actions, automating workflows, reducing deployment times, and improving the developer experience.
- Optimized package bundlers, reducing package size to significantly improve application performance.
- Created performance monitoring dashboards using Datadog to track system health and optimize performance.
- Managed production deployments and conducted performance monitoring using Jenkins in combination with Spinnaker.
- Implemented CICD pipelines using GitHub Actions, streamlining development and deployment workflows.
- Led multiple side projects to enable teams to integrate with core services and generate visual transcripts using Git, AWS, and Jenkins.

Awards:

- GSD (Get Stuff Done) Award Q1 2023 for championing the analytics project.
- TNT (Team Norm Trendsetter) June 2024 for successfully prototyping react based applications to test data driven cards.
- TNT (Team Norm Trendsetter) February 2025 for powerhouse of execution and reliability.

Senior Software Engineer (Solution Street)

09/2017 - 09/2021

- Collaborated with multiple high-profile clients to architect, develop, and deliver robust, scalable web applications tailored to their specific business needs.
- Worked with diverse teams across various industries, providing custom solutions that improved user experience, performance, and overall application reliability.
- Utilized modern front-end frameworks, including React and Angular, to build responsive, high-performance web applications for clients in finance, e-commerce, and government sectors.
- Led or contributed to the end-to-end development lifecycle, from requirements gathering and design to implementation and deployment, ensuring client satisfaction and project success.
- Focused on building maintainable, testable code by implementing best practices, such as unit testing, code reviews, and continuous integration pipelines.
- Fostered strong client relationships, providing technical consultation and ensuring the delivery of high-quality solutions on time and within budget.
- Adapted to diverse business environments and quickly learned client-specific tools, platforms, and requirements to deliver effective, customized solutions.

CGI (*contract with Solution Street*)

09/2017-08/2019

- Developed reusable, high performance React and Angular components to enhance application scalability.
- Designed and implemented a robust unit testing framework using Jest and Enzyme, improving code reliability.
- Researched, prototyped, and developed innovative features to drive product enhancements.
- Built responsive, accessible web pages adhering to WCAG and Section 508 compliance standards.
- Optimized build processes by updating Webpack and Babel configurations for better performance.
- Mentored team members, fostering skill development and best practices in front-end engineering.
- Led scrum ceremonies and knowledge-sharing brown bag sessions to improve team collaboration.
- Authored comprehensive technical documentation to streamline onboarding and development.

KPMG (*contract with Solution Street*)

- Developed data visualization application using React and D3.
- Prototyped dynamic pages with auto-updating capabilities based on user interaction with the UI.
- Implemented metadata-based auto page generation.
- Ensured smooth DOM manipulation with React and D3.

SLATE (*contract with Solution Street*)

- Created native web application for Android.
- Enhanced native phone capabilities using pre-existing web apps.
- Developed a secure authentication mechanism using JWT tokens.
- Dynamically updated application metadata.
- Improved notification features.
- Utilized Chrome custom tabs for advertisement.
- Researched and implemented security features.

UNISON (*contract with Solution Street*)

- Automated testing using Selenium.
- Added Gherkin features to the testing framework to promote BDD.
- Automated test cases which were performed manually.
- Refactored code to replace outdated ORM.

CONGRUITY360 (*contract with Solution Street*)

- Developed data classification and visualization platforms.
- Implemented dynamic paging and data navigation using React.
- Utilized D3 charts for data visualization.
- Promoted code reusability and automated page generation.

Senior Web Application Developer (FINRA)

01/2016-07/2016

- Led the migration of GWT applications to Angular, improving performance and scalability.
- Developed front-end user interfaces using HTML5, CSS3, jQuery, JavaScript (AngularJS), AJAX, and Bootstrap for a modern, responsive design.
- Managed third-party dependencies using Bower and Node Package Manager to streamline the build process.
- Designed and implemented responsive web pages utilizing Twitter Bootstrap, Flexbox, and media queries for seamless cross-device compatibility.
- Created reusable widgets through custom directives for company-wide use, enhancing UI consistency.
- Developed 508-compliant web applications to meet accessibility standards.
- Automated tasks such as minifying JavaScript and CSS using task runners to optimize application performance.
- Converted REST API responses from Hibernate and Spring to Express, streamlining backend integration.
- Implemented client-side validation for forms to ensure data accuracy and security.
- Mentored team members to accelerate project delivery while ensuring high coding standards.
- Configured testing environments with Karma and Jasmine to ensure comprehensive unit test coverage.

Web Application Developer (Millennial Media)

05/2015-12/2015

- Developed interactive, map-based data visualizations using Leaflet to enhance user insights.
- Analyzed and designed application navigation workflows for improved usability.
- Created and tested directives and services using Jasmine and Karma to ensure code reliability.
- Implemented sandboxing for asynchronous functions, enabling more effective unit testing.
- Researched and integrated code coverage tools like Istanbul and SonarQube for front-end test analysis.
- Optimized application performance by reducing excessive two-way data binding.
- Documented module details on Confluence to improve knowledge sharing and onboarding.
- Conducted thorough code reviews to maintain high-quality standards.

- Led story grooming sessions to refine requirements and prepare for upcoming sprints.

Web Application Developer (RealTruck.com)

03/2014-04/2015

- Performed system and code analysis to identify optimization opportunities, improving performance and maintainability.
- Designed, developed, and maintained scalable web applications using PHP, JavaScript, CSS, HTML, and jQuery.
- Optimized SQL queries for enhanced database performance and provided technical support.
- Engineered a dynamic Banner Management System to streamline content management.
- Implemented robust URL validation mechanisms using REST APIs for improved security and reliability.
- Leveraged RabbitMQ for efficient batch processing, enhancing system scalability.

Web Application Developer (MSUM)

09/2010-12/2013

- Participated in all stages of the Software Development Life Cycle (SDLC), including requirement gathering and analysis.
- Designed and developed intuitive, user-friendly interfaces using HTML, JavaScript, CSS, jQuery, and Bootstrap.
- Built and optimized PHP classes with efficient SQL queries to enhance application functionality.
- Managed and maintained SQL Server databases, ensuring data integrity and performance.
- Provided technical support and training to improve user adoption and system efficiency.
- Authored detailed development documentation to streamline processes and knowledge sharing.
